

**Midhun T**

*Mobile Developer*

## SUMMARY:

- 4+ years of experience in Mobile development, primarily using React Native and TypeScript, with experience across application development, testing, debugging, maintenance, and production support.
- Strong experience developing cross-platform mobile applications for Android and iOS using React Native, Expo, Expo Router, EAS Build, and modern React development practices.
- Hands-on experience with TypeScript, React Hooks, component lifecycle patterns, Redux Toolkit, Context API, React Navigation, reusable components, and application state management.
- Experienced in designing and implementing responsive mobile interfaces with attention to application performance, maintainability, and consistent behavior across platforms.
- Experience improving application responsiveness through optimized state management, API caching, pagination, lazy loading, and efficient UI rendering.
- Strong experience implementing animations and interactive gestures using React Native Reanimated to provide smooth user interactions.
- Hands-on experience integrating REST APIs, WebSocket, and Socket.io for application data, real-time communication, live updates, and synchronization.
- Experience implementing Firebase Cloud Messaging (FCM) and APNs notification workflows across foreground, background, and terminated application states.
- Experience working with Android and iOS build, release, and deployment workflows using EAS Build, GitHub Actions, and Codemagic.
- Experienced in debugging production issues, analyzing application crashes,

resolving integration issues, and contributing to application stability improvements.

- Experience implementing deep linking, authentication, biometric authentication, payment integrations, and third-party mobile services.
- Good understanding of Git workflows, pull requests, code reviews, branching strategies, release management, and Agile development practices.

## RESPONSIBILITIES:

- Developed and maintained production-ready cross-platform mobile applications using React Native and TypeScript for Android and iOS.
- Implemented reusable React Native components and application modules following maintainable and scalable development practices.
- Used React Hooks, component lifecycle patterns, Redux Toolkit, and Context API to manage application state and user interactions.
- Designed and maintained navigation flows using React Navigation and Expo Router, including deep-linking requirements.
- Integrated REST APIs and handled asynchronous application workflows, API responses, error handling, and data presentation.
- Implemented WebSocket and Socket.io based communication for real-time updates, matchmaking, notifications, and user interactions.
- Improved application responsiveness through efficient state management, API caching, pagination, lazy loading, and optimized data loading strategies.
- Implemented smooth animations and gesture-based interactions using React Native Reanimated while maintaining responsive UI behavior.
- Investigated application issues through debugging, crash reports, logs, and production issue analysis, contributing to application stability and reliability.
- Implemented Firebase Crashlytics for production crash monitoring and root-cause investigation.

- Integrated Firebase Cloud Messaging (FCM) and APNs for notification workflows across foreground, background, and terminated application states.
- Configured and maintained EAS Build workflows for Android and iOS application builds, testing, and release generation.
- Worked with GitHub Actions and Codemagic to support automated mobile build and deployment workflows.
- Supported Apple App Store and Google Play Store publishing, review processes, release management, and production deployments.
- Collaborated with backend developers to integrate REST APIs, Firebase services, authentication, real-time communication, and third-party services.
- Participated in code reviews, sprint planning, technical discussions, testing, debugging, estimation, and release activities.
- Worked with cross-functional teams to troubleshoot production issues and deliver reliable mobile application features.

## TECHNICAL SKILLS:

**Languages:** Javascript and Typescript.

**React & React Native:** React Native, React Hooks, Component Lifecycle, Expo, Expo Managed Workflow, Expo Router, React Navigation, React Native Reanimated, Reusable Components.

**State Management:** Redux Toolkit, Context API.

**Mobile Architecture:** MVVM, MVC, Modular Application Structure, Navigation Architecture.

**API & Communication:** REST APIs, Axios, WebSocket, Socket.io, Real-Time Data Communication.

**Performance:** State Management Optimization, API Caching, Pagination, Lazy Loading, UI Optimization, Animation Optimization.

**Navigation & Integration:** React Navigation, Expo Router, Deep Linking, Authentication, Biometric Authentication.

**Notifications:** Firebase Cloud Messaging (FCM), Apple Push Notification Service (APNs), Pushwoosh.

**Firebase:** Firebase Authentication, Firestore, Cloud Functions, Firebase Crashlytics, Firebase Remote Config.

**Payments:** Stripe, StoreKit, Google Play Billing, In-App Purchases.

**Build & Deployment:** EAS Build, GitHub Actions, Codemagic, Android Build & Release, iOS Build & Release, App Store, Google Play Store.

**Debugging & Development:** Visual Studio Code, Android Studio, Application Debugging, Crash Monitoring, Production Issue Analysis.

**Cloud:** Firebase, AWS, Microsoft Azure.

**Source Control:** Git, GitHub, GitLab, Bitbucket, Azure Repos.

**Project Management:** JIRA, Azure DevOps, Trello.

**Operating Systems:** Windows, macOS.

## RECENT PROFESSIONAL EXPERIENCE:

### **Project Name: Job Space**

**Technologies:** React Native, Expo Managed Workflow, Expo Router, EAS Build, TypeScript, Redux Toolkit, Firebase, Firebase Cloud Messaging (FCM), Firebase Crashlytics, Firebase Remote Config, React Navigation, REST APIs, GitHub Actions, Codemagic.

**Team Size:** 10

**Project Management Tool:** Azure DevOps

## Description

Job Space is a next-generation job-seeking platform designed exclusively for Australia and New Zealand. It empowers job seekers to explore opportunities across sectors, create professional profiles, and apply seamlessly to roles.

- **Job Search & Applications:** Job seekers can browse, filter, and apply for jobs across multiple sectors. Saved jobs and application tracking are supported.
- **Profile & Resume Management:** Create detailed profiles with resumes, career highlights, and skills.
- **Cover Letter Support:** Upload or create personalized cover letters for job applications.
- **Job Alerts:** Create alerts based on job type, company, or location and receive instant notifications when matching jobs are posted.
- **Performance Tracking:** Application status updates and notifications keep job seekers informed throughout the hiring process.
- **Remote Config Management:** Firebase Remote Config is used to dynamically update app defaults such as job categories, filters, and role configurations without requiring app updates.
- **Crash Reporting:** Firebase Crashlytics is integrated to monitor, track, and resolve application crashes in real time.

## Responsibilities

- Developed and maintained core job seeker workflows using React Native and TypeScript, including job search, job applications, profile creation, and account management.
- Built resume upload and cover letter management features with seamless document handling and validation.
- Integrated REST APIs for job listings, application submissions, user profiles, and notification services.
- Implemented Firebase Firestore and Cloud Functions for real-time job data synchronization and backend automation.

- Developed job alert functionality with Firebase Cloud Messaging (FCM) push notifications for newly posted jobs.
- Implemented Expo Router for navigation architecture and route management across application modules.
- Configured and maintained EAS Build pipelines for Android and iOS build generation, testing, and deployment.
- Configured EAS Build pipelines for Android and iOS build generation and release management.
- Implemented push notification workflows using Firebase Cloud Messaging (FCM) and Apple Push Notification Service (APNs) for foreground, background, and terminated application states.
- Optimized application performance through efficient state management using Redux Toolkit, API caching, pagination, and lazy loading techniques.
- Managed Firebase Authentication, Firestore security rules, and role-based access control.
- Configured Firebase Remote Config to dynamically manage app behavior, feature flags, and content updates without requiring new releases.
- Integrated Firebase Crashlytics for crash monitoring, root-cause analysis, and continuous stability improvements.
- Implemented CI/CD pipelines using GitHub Actions and Codemagic for automated builds, testing, and deployment.
- Supported Apple App Store and Google Play Store review, deployment, and release activities.
- Collaborated with cross-functional teams to troubleshoot production issues, enhance UI/UX, and deliver high-quality mobile experiences.
- Followed Agile methodologies, participated in sprint planning, code reviews, and release management using Azure DevOps.

**Project Name: Swapsi**

**Technologies:** React Native, Expo Managed Workflow, Expo Router, EAS Build, TypeScript, Firebase, Node.js (Express), Firestore, Stripe Payments, Google Authentication, Firebase Remote Config, Firebase Cloud Messaging (FCM), React Navigation, Redux Toolkit, Socket.io, WebSocket, React Native Reanimated, Codemagic, GitHub Actions, StoreKit, Google Play Billing, In-App Purchases.

**Team Size: 8**

**Project Management Tool: JIRA**

**Description:**

- **Anonymous Swapping Logic:** Users list items and anonymously like others' listings; mutual likes form swap candidates without revealing identities until listing ends.
- **Timed Listings & Matchmaking:** Each listing runs for a fixed duration (e.g., 3 or 7 days), after which a leaderboard of mutual matches is generated for swap selection.
- **Priority-Based Swap Decisions:** The user who listed first gets the first choice to finalize a swap from their leaderboard, ensuring fair and structured match resolution.
- **Leaderboard-Based UI:** Users see a curated leaderboard of matched listings; selected items are removed from all other leaderboards once a swap is confirmed.
- **Boosts & Unlocks for Monetization:** Users can pay to boost their listing's visibility or unlock additional swap candidates lower down the leaderboard.
- **User Experience Enhancements:** Implemented smooth animations and interactive UI transitions using React Native Reanimated to enhance user engagement and application performance.
- **Real-Time Backend with Firebase & Socket.io:** Used Firestore and Socket.io for real-time syncing of listings, matches, notifications, and swap activities.
- **Remote Config & Dynamic Controls:** Firebase Remote Config controls listing durations, app settings, user roles, and environment configurations dynamically.
- **Stripe & In-App Payments:** Integrated Stripe and in-app purchase APIs to handle payments securely for boost and leaderboard unlock features.

- **Push Notifications:** Implemented Firebase Cloud Messaging (FCM) to notify users about matches, swap requests, listing expirations, and completed swaps.
- **CI/CD Integration:** Automated testing and build generation using Codemagic and GitHub Actions for efficient deployment and release management.
- **Intuitive UI/UX:** Designed an engaging, gamified interface focused on discoverability, responsiveness, accessibility, and smooth user interactions.

### **Responsibilities:**

- Implemented Expo Router based navigation architecture for scalable route management and deep linking support.
- Configured EAS Build workflows for Android and iOS release generation and deployment.
- Integrated Stripe payment gateway, StoreKit, Google Play Billing, and In-App Purchases for premium feature monetization.
- Implemented WebSocket and Socket.io based real-time communication for instant matchmaking updates, notifications, and user interactions.
- Implemented push notification workflows using Firebase Cloud Messaging (FCM) and APNs for Android and iOS platforms.
- Supported Apple App Store and Google Play Store publishing, release management, and review process activities.
- Optimized animations and user interactions using React Native Reanimated to deliver smooth and responsive user experiences.

### **Project Name: Azzetta**

**Technologies:** React Native, TypeScript, Expo Router, Deep Linking, Biometric Authentication, Firebase Cloud Messaging (FCM), Apple Push Notification Service (APNs), Push Notifications.

**Project Management Tool: JIRA****Description:**

- Keep track of warranty expiration dates and schedule regular maintenance for your appliances and gadgets.
- Receive reviews from trusted sources like friends and family to make informed decisions about products.
- Access ratings and recommendations for local technicians and businesses in your neighborhood.
- Effectively manage your EMIs, ECS payments, and monthly fees for better financial management.
- Receive notifications and reminders for upcoming warranty expirations and maintenance schedules to stay organized.
- Access a comprehensive database of user experiences and feedback on various products and services to make informed choices.

**Responsibilities:**

- Integrated DigiLocker to enable safe and secure document management.
- Implemented local folder management to store uploaded documents (PDFs/Images) in a structured and isolated directory.
- Translated UI/UX designs into functional and responsive code, ensuring a smooth and intuitive user experience.
- Implemented biometric authentication (Face ID/Touch ID) to enhance secure and seamless user login experience.
- Implemented the complete insurance flow, including document submission, policy details, and status tracking.
- Implemented push notification workflows using Firebase Cloud Messaging (FCM) and APNs for warranty reminders, maintenance alerts, and user engagement updates.
